AeroBook

Entity-Relationship (ER) Persistence Model

Relational Schemas, Constraints, Keys & Foreign References across 8 Isolated MySQL Databases

SPEAKER TALKING POINTS

- Database-per-Service: 8 private MySQL schemas prevent cross-service deadlocks and allow autonomous schema scaling.
- Intra-Domain Cascades: Direct foreign keys enforce relational integrity within services (e.g. bookings to passengers).
- Master Seed Dataset: 20 user credentials, 15 aircraft, 30 scheduled commercial flights, and active promotional coupons.
