AeroBook

System Architecture & Microservices Topology

Multi-Tier Enterprise Cloud Architecture: Netty Ingress, Eureka Discovery, AMQP Event Bus & Persistence

SPEAKER TALKING POINTS

- Single Point of Ingress: Client interacts exclusively through Netty API Gateway (8083), hiding all internal service ports.
- Perimeter Security: Cryptographic JWT token validation occurs at the Gateway, injecting X-User-Id and X-User-Role claims downstream.
- Hybrid Communication: OpenFeign for low-latency synchronous RPC queries + RabbitMQ for decoupled, reliable event delivery.
