# Technical Challenges Overcome & Future Roadmap

Distributed Data Consistency, Perimeter Security, Concurrency, Redis Caching & Resilience4j Circuit Breakers

## SPEAKER TALKING POINTS

- Highlight Distributed Consistency solution: OpenFeign for read validation + RabbitMQ for eventual consistency.
- Explain Race Condition resolution: Pessimistic locking (SELECT FOR UPDATE) in Flight Service prevents flight overselling.
- Outline Future Scope: Redis cluster caching, Resilience4j circuit breakers, Flyway migrations, and WebSockets/SSE.
